

SEP Software Corp.

SEP Software Corp. is the premier technology leader providing standardized and high performance data availability solutions for professional IT environments of all sizes. SEP sesam and its associated products deliver seamless solutions for all backup requirements.

SEP sesam and Virtualization

When designing the overall virtual layout, backup and recovery options must be considered before and during implementation. Utilize best practice centralizing the management and process control for ease of monitoring and securing the environment.

SEP sesam offers outstanding backup options for virtualization platforms, including VMware, Citrix XenServer, XEN and Hyper-V. The fully integrated solutions offered by SEP sesam ease the installation into enterprise backup environments and allows for a maximum of flexibility when determining backup strategies.

Data Security For Virtualized Environments

FEATURES

- Agent-Less Technology
- SAN Ready Backup Strategy
- Single File Restore for VSS on Windows, Linux and Unix Guests*
- Server Snapshots on Linux and VSS for Windows
- Can Restore to Other Hosts, HA Clusters or Pools
- Can Be Used to Keep a Disaster Recovery Site in Sync for a Hot or Cold Availability Solution
- Disaster Recovery: Used to Synchronize Your Virtual to Another Cluster or Pool at an Offsite Location
- Convert Between Virtual and Physical Servers [V2P and P2V]*
- Encryption

VMware

- Restart VMs Directly from Backup, Completely Eliminating any Restore or Down Time
- Full or Incremental Backups with Change Block Tracking (CBT)
- Full Support for ESX backups through a VCB Proxy, VADP or direct access to the Hypervisor

Citrix XenServer

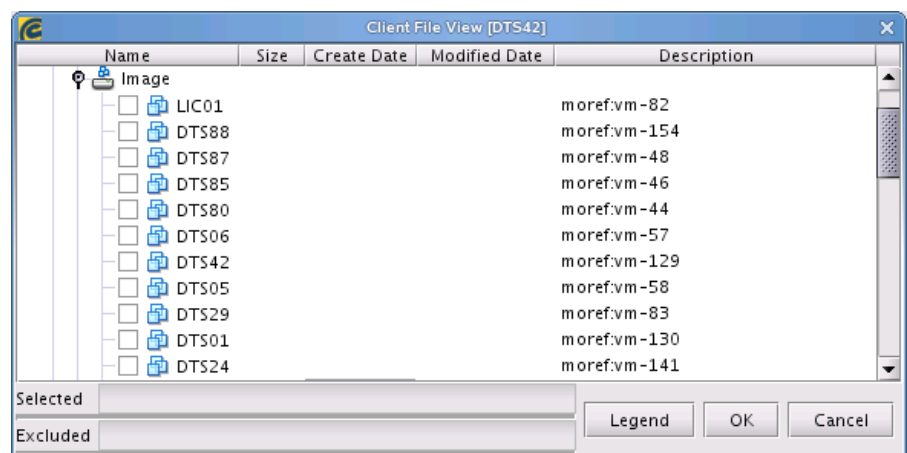

- Simplifies Backup and Restores with Integration into the XenCenter Console
- Online hot and warm module using the XenServer API and Solves License Activation Loss
- Can Backup Host Specific & Metadata Info

Microsoft Hyper-V

- File Consistency with VSS
- Exchange, SQL, Sharepoint Aware

Open Source Xen

- Backup Using LVM Snapshots
